NOTE	1. All parameters NOT specially mentioned are measured at 230VAC input, rated load and 25℃ of ambient temperature. 2. Ripple & noise are measured at 20MHz of bandwidth by using a 12" twisted pair-wire terminated with a 0.1uf & 47uf parallel capacitor. 3. Tolerance : includes set up tolerance, line regulation and load regulation. 4. The power supply is considered a component which will be installed into a final equipment. The final equipment must be re-confirmed that it still meets EMC directives. 5. Installation clearances : 40mm on top, 20mm on the bottom, 5mm on the left and right side are recommended when loaded permanently with full power. In case the adjacent device is a heat source, 15mm clearance is recommended. 6. 3 seconds peak power max. and the average output power should not exceed the rate power. 7. Derating may be needed under low input voltage. Please check the derating curve for more details. 8. The ambient temperature derating of 3.5℃/1000m with fanless models and of 5℃/1000m with fan models for operating altitude higher than 2000m(6500ft).

1. Current sharing
   (1)Parallel operation is available by connecting the units shown as below (P+,P- are connected mutually in parallel) :
   (2)The voltage difference among each output should be minimized that less than 0.2V is required.
   (3)The total output current must not exceed the value determined by the following equation (Output current at parallel operation)
   =(The rated current per unit) x (Number of unit) x 0.9.
   (4)In parallel operation 8 units is the maximum, please consult the manufacture for other applications.
   (5)When in parallel operation, the minimum output load should be greater than 3% of total output load.
   (Min. load > 3% rated current per unit x number of unit)
