### **ESD09S-PDW SERIES APPLICATION NOTES: EXTERNAL CAPACITANCE REQUIREMENTS:**

No external capacitance is required for operation of the ESD09S-PDW series.

To meet the reflected ripple requirements of the converter, an input impedance of less than 0.5 ohm from DC to 100KHz is required.

External output capacitance is not required for operation, however it is recommended that 10uF tantalum and 0.1uF ceramic capacitance be selected for reduced system noise.

Additional output capacitance may be added for increased filtering.

### **Negative Outputs:**

A negative output voltage may be obtained by connecting the +OUT to circuit ground and connecting -OUT as the negative output.
